Remarks -

The barometer has risen rapidly in Scotland since yesterday morning while over Ireland & N W France there is again a tendency to a diminution of pressure. The stormy weather experienced in England yesterday appears to have passed off in a Northeasterly direction - but the considerable differences of temperature, and changes of wind reported this morning from the various stations tend to show that the weather has not yet become settled.

June 2nd.

Remarks.

This morning a southwesterly current prevailed along the southern coasts, while over Scotland & northern England easterly & southeasterly winds continue. Much rain (about an inch) fell last night ~~along &~~ over that part of the country where the two currents seem to have most impinged upon each other. There have been heavy squalls in places - & more wind is probable.

Remarks.

The barometric pressure over Norway & Sweden increased from 29.50 on Thursday to about 30.10 yesterday. In Spain also the barometer yesterday had risen to about the same height, while in England it was nearly half an inch lower. The result has been the meeting over the British Isles of currents of air differing much in temperature, and some wind and much rain has

5/6/65

Remarks

The barometric pressure over Great Britain has increased rather rapidly since Saturday. It appears however to ~~have a tendency~~ be somewhat to fluctuate over the northern parts of Scotland. Temperatures generally have risen, - but in N W France they are rather lower and there N E winds which ~~this~~ may not improbably extend to this side of the Channel are now prevalent.

(6/6/65)

Remarks.

The atmospheric pressure yesterday was considerable over the whole of Europe but with a tendency to diminish over the north of Sweden, and over southern Spain. This morning the high pressures continue over the United Kingdom, although the barometer is still rather unsteady in the North. The high temperatures ~~This circumstance coupled with the~~ reported this morning (68° in London at 8 a.m.) & the some-what variable winds, with the unsteadiness of the barometer in places, render thunderstorms probable.

Remarks

Temperatures in Scotland this morning are rather lower than they were yesterday, while the barometer has ~~continued~~ to rise ~~both in Scotland~~ over the whole kingdom. In the gulf of Bothnia however the barometric pressure had decreased yesterday rather considerably; the effect of which will probably be to cause the winds over Scotland to return to NW & SW and to produce strong westerly winds on the coast of Denmark & in the Baltic.

	Friday.	Probable	Saturday.

Remarks. (8/6/65)

The diminution of ~~barometric~~ atmospheric pressure which commenced in the Gulf of Bothnia on Tuesday continued yesterday; the barometer at Haparanda reading about an inch lower than in England. This morning the wind is strong from N.W at Heligoland, and the winds over Scotland have become westerly with higher temperatures and ~~[illegible]~~ ~~diminishing pressure~~ a slightly falling barometer.

Remarks

The high barometric pressures which been universal over this country ~~for~~ during the past week ~~have~~ are today rather diminishing. The winds over Scotland have freshening - and there was some rain last night on the west coast of Ireland.

	Tuesday.	PROBABLE	Wednesday.

(13/6/85)

Remarks

On Saturday last there was a fresh diminution of atmospheric pressure over the Gulf of Bothnia where the barometer fell to about 29.35°. The influence of this diminished pressure appears to have extended in some degree to this country, for, on Saturday, barometers here fell about 3 tenths, with fresh winds and a wild-looking sky. This apparent effect was however but temporary, the new area of least pressure having followed the course of the preceding one (mentioned on Friday last) at a rate of about 7° or 8° of longitude per day to the eastward. Yesterday its position was a few degrees to the eastward of St Petersburg and strong N by and NW by winds prevailed over the Baltic.

(14/6/65)

Remarks

For the past fortnight the weather has been stormy & unsettled in Northern Europe. Yesterday there was ~~another~~ a fresh diminution of atmospheric pressure (the third within a week) over the Gulf of Bothnia. The area of least pressure will probably, as in the previous instances, advance in an easterly direction and be followed by strong NW winds over the Baltic and on the Danish coasts.

...E to NNW and back — light to moderate — fine.

...E to WNW, light to fresh — fine.

SOUTHERN NNE to WNW, light to fresh — generally fine.

EASTERN NE to NW and SW, moderate to fresh.

15/6/65

Remarks

The decrease in the atmospheric pressure over the Gulf of Bothnia, mentioned yesterday, was followed in the evening by violent winds from N with hail and rain along the Swedish coast, the wind continuing strong till the following day. The area of least pressure has moved rapidly towards the S.E.; its effects having only been slightly felt over the United Kingdom, where barometers generally are ~~slightly~~ rising a little this morning.

Remarks (19/6/65)

The winds have become extremely variable in direction over Ireland and Scotland although northeasterly winds continue to prevail generally over the south of England and over France. The barometric pressure continues high ~~est~~ over the British Isles than either to the eastward or southward; on Saturday it decreased to 29.70 ~~at St Pet~~ over Russia & to 30.00 over Spain.

Remarks (22/6/65)

Yesterday the weather continued fine over Europe generally, ~~the~~ barometric pressures decreasing gradually to the eastward and southward from ~~about~~ 30.40 inches over the British Isles to 29.70 inches at Moscow and to 30.00 inches in the south of Spain. To-day the barometer is falling a little in Scotland, and the winds are extremely variable. Some of the temperatures reported this morning are ~~very~~ rather high; ~~Q~~ Brest 73° and Weymouth 72° (at 8 a.m) while at Yarmouth the temperature was 20° lower.

Remarks (23/6/65)

Atmospheric pressure increased yesterday over Spain while diminishing gradually over Scotland. Today the barometer continues to fall in the north with rather high temperatures and the winds over Scotland and Ireland have become SW by and are freshening, with some rain in places. There is therefore a probability of more wind and rain.

Tuesday. PROBABLE ... day.

Northwesterly fresh to strong - squally	ON NORTHERN COASTS	NW to SW strong - squally - with rain in some places.

24/6/65

The atmospheric pressure which was stationary yesterday over Spain has increased this morning in the North and West of the British Isles whilst it has decreased to the eastward of them. The winds very active over the United Kingdom have become Westerly or Northerly and the temperatures generally have fallen, slightly only in the south and west, but from 5° to 10° in the north and east. Rain fell yesterday or last night in the north and west, and a further continuance of unsettled weather is probable.

Remarks (26/6/65)

On Saturday barometric pressures decreased in an easterly direction from 30.20 in. over England to 29.50 in the neighbourhood of Moscow. Yesterday barometers fell in the north of Scotland to about 29.90, & rain has fallen in the northern & western parts of the kingdom, but today pressures are again increasing and NW winds prevail, ~~generally~~ with an overcast sky; indicative probably of the existence of an upper current from another direction. –

Remarks

27/6/65

Although the barometric pressure has continued to increase over the British Isles, it had yesterday fallen to 29.20 inches at Stockholm. The result will probably be stormy weather on the coasts of Norway, Denmark and the Baltic coasts, and a diminution of pressure with increased wind and some rain on this side of the north sea.

(28/6/65)

Remarks

The barometric depression in the Baltic on Monday has been followed by rain and hail at Stockholm & St Petersburg. Yesterday the barometer continued rather low over the whole of eastern Europe; varying from 29.50 in: to 29.70 in:. The barometric pressure over the British Isles & France is to-day diminishing.

Remarks (29/6/65)

The barometric pressure has decreased steadily and considerably over the British Isles and France since yesterday. Cautionary signals were sent to certain parts of the coasts yesteday evening. - Much rain has fallen in places, but there has not been much wind at present. There is apparently an intermingling & balancing of two opposing currents, producing temporarily a comparative calm.
